About this document

This document provides information about the changes, enhancements, known issues and limitations, and the defects fixed in this release.

What's new

This section provides information on what's changed, enhancements, and new features of this release.

New features

- **Log management:** You can now download specific or all application logs. For details, refer to [Log management](#).
- **Environment variables:** You can now check the runtime configuration of the application. For details, refer to [Environment variables](#).
- **Process assessment:** Added a **Retry All** button for failed assessments.

Updated features

- **Upload Project Documents:** Restored this feature. You can use it while adding a new project or updating project details.
- **Project sharing:** You can now add new contributors, see the list of users who currently have access to the project, and unshare the project from the same interface.
- **Project management:** The Delete option is now visible only to the project owner.
- **Newly created releases:** Northstar fetches the list of users from your project management tool. This makes assigning tasks easier.
- **Release plan creation:** Enhanced the workflow:
 - Added support for asynchronous calls during release plan creation.
 - Enhanced language suggestion during release creation.
 - Improved the plan status progress screen to allow additional input details.
 - Implemented a retry mechanism for failed use cases.
- **Operation: Assessment**
 - Changed the branch selection from tree-based to a drop-down menu for selecting module names.
 - Mapped repositories to the release details page.
- **Operation: Northstar View**
 - Added a menu on the release details page, **Select Release** with a drop-down list. It lets you switch between releases.
 - Improved navigation; changed tabs to a drop-down list.

Deprecated and removed features

Operation	Description
Northstar View	While creating a release plan, the following types of releases are removed: Language Upgrade and Improve Security Posture.
Not applicable	The Guideline feature is removed.

Known issues and limitations

This section provides information on the known issues and limitations of this release.

Operation	Area	Limitations
For Administrators	User management	The Bulk Upload feature does not work as expected.
Assessment	Performance	<ul style="list-style-type: none"> When multiple users access the application simultaneously or when working with large repositories, the Project Scan process may take longer to complete. Some repositories in Code Analysis display the message <code>Failed to load content</code>.
Northstar View	Task: Creating release plan	You cannot create a green field project. Workaround: Provide dummy credentials in the Project management tools and Source version control tools fields.
		Recreate the release plan if the network disconnects during the generation of release plan details.
		Inconsistent use case count after manually adding new use cases to an existing plan.
		After selecting specific language for release plan, the use case questionnaire displays questions about languages.
		Release plan generation failing with more number of usecases.
		The Market trends shows blank during release creation.
		The UI occasionally becomes unresponsive on the questionnaire page, preventing to proceeding further.
		The Generate Project Plan button becomes unresponsive on the Final Use Case page while editing a

Operation	Area	Limitations
		draft plan
	Task: Publish a release plan	Any additional epics or use cases added to the draft release during publishing are not included in the release plan.
		Test case creation API has slow response or fails intermittently .
		Publishing release is slow or fails with more number of use cases.
	Task: Export a release plan	The exported PDF contains excessive data when downloaded because epics, stories, and tasks have large descriptions.
		Excel or PDF taking longer time to export and fails sometimes.
		Reports downloaded for Published Releases page contain different test cases than those displayed under Release Items on publish page.
	Task: Review the releases dashboards	Network tab on ticketing dashboard shows <code>error 500</code> .
Manage Backlog	Task: Create project backlog	The backlog analysis is not populating data for backlog features, leading to incomplete insights.
	Task: Add an existing project	For some projects, the Aha tool does not populate data on the Priority Backlog and Business Case pages.
<ul style="list-style-type: none"> Assessment Northstar View 	Feature: Process Assessment	Technical debt report takes longer time to load.
	Feature: Releases dashboards	Intermittent issue with information dashboard: Summary tab shows blank, Features tab shows No Features found, Code analysis and Diagrams is does not loading.

Fixed defects

This section provides information about the defects fixed in this release.

Operation	Area	Defect	Solution
Northstar View	Task: Add an existing project	During Jira configuration, when we configure Feature in Level1 Hierarchy field and save the tool details. It shows	Fixed code to address the issue.

Operation	Area	Defect	Solution
		zero value for epic, story, and tasks on Summary page.	
		While editing project details, changes in fields does not enable the Update button.	Fixed the issue.
		Upload file feature needs to be updated for supported file type tool tip and field validation must be added.	Added tool tip and field validation.
		During editing project if we upload a new file. The token needs to be add again.	Fixed the code to handle token value.
		During editing Upload File page, the Confluence URL appears empty, and the password is visible. The expected behavior is to display the Confluence URL and hide the password.	Fixed the code to update the behavior.
		For Upload file feature, The aggregated JSON content for release notes data is displayed as empty.	Added the JSON aggregated content support.
		While editing project details, after updating Jira details the error message shown <code>Error Accessing Repository</code> .	Updated the logic to handle issue.
	Task: Creating release plan	Use case editor text overlaps while editing.	Resolved issue by updating editor style.
		After Save as Draft, user is sent back to the previous screen instead of Drafts.	Screen navigation corrected.
		From a draft release, adding use cases disables generate release plan.	Issue fixed by handling state correctly.
		Assignees are not reflecting in project management tool as they are assigned in release plan.	Fixed Jira connector issue.

North Star 3.4 Release Notes

About this document

Operation	Area	Defect	Solution
		Default user is assigned to the epic and user can not be updated at story or task level while creating new release plan.	Fixed code to address the issue.
	Task	Published release timeline → View Details → Info → Summary showed null multiple times; Select Module appeared even when the release wasn't mapped (blank values).	Summary now displays actual values. Select Module only appears for mapped releases.
	Task	The ticketing option does not appear in the project list, even though the ticketing system is configured.	Visibility and permissions checks updated. .
	Task	Retrigger activity in code assessment, shows a generic failure message.	Updated the messages to show the reason of failure.
	Task	Data curation failed message lacks a clear reason on retrigger.	Failure messages are now specific with actionable guidance.
	Task	Published timeline page, shows zero value of the features for newly published release plan.	Fixed code to address the issue.
	Task	Export icon shows as pdf, actually the file is downloaded in excel format in feature tab.	Modified the correct icon picture.
	Task	Select Release drop-down shows unpublished or unmapped items on release details page.	Drop-down now shows only configured releases.
	Task	During publishing, while calculating sprint days, Average sprint duration values are not rounded off .	Fixed the code to show final value must be rounded off.
Manage Backlog	Task: Create project backlog	The Business Case page displays the following: Error	API and error
